

PROFESSIONAL
CATALOGUE

EDITION N. 3

On the occasion of its 20th anniversary, Ekommercer gives itself a new logo and a new image.

What's the goal? Strengthen the identity of the Brand, inextricably linked to the history of Pest Management and its cultural and social changes and project it into the future by bringing at the center, once again, **the value, always dear to Ekommercer, of eco-sustainability.**

This new visual identity, highlight **Ilaria Casalanguida**, Director Ekommercer "approaches even more Ekommercer to our vision of the future: disinfection not only as a gesture of responsibility to protect public health but also as a gesture of love for the planet".

The new logo gets from the past the nuances of green but sees the introduction of a graphic element with a strong symbolic connotation. The design, in fact, is inspired to the Koru, a spiral shape obtained from the natural profile of the fern of silver, plant that in the ancient Maori culture symbolizes **the new life, growth, strength, renewal.**

The circular shape of the Koru translates the idea of perpetual movement, while the inner spiral suggests a return at the point of origin whispering, with a reverent tone towards forms natural from which it originates, the **"E"** by Ekommercer.

WHO WE ARE

Founded in 2001 with the aim of promote the use of the innovative system of ecological rodent control Ekomille, **Ekommerce** is, over time, to carve out **a role of prestige in the market of Pest Control by promoting the culture of disinfestation responsible for the protection of the environment and animals.**

Today Ekommerce is a point of reference of the category market where it operates as a company specialized in development and marketing of solutions for **pest control, disinfestation and disinfection of civil, industrial and Zootechnical.**

WHAT WE DO

We produce product lines for the monitoring and control of rodents and flying insects such as the **Ekomille** (rodent control device), the **Klight** UV traps, the traps and glueboards **Tak** and **Flux**.

Our offer consists of a complete range of specific solutions for the disinfestation, disinfection and rodent control.

OUR CUSTOMERS

The expectations and needs of our customers have a decisive influence on the quality of our products and our services that, for this reason, reflect always very **high standards**.

Our lines are produced with materials of high quality and with an eye always focused on environmental protection.

With the aim of offering our customers services as well as products and promoting the culture of Made in Italy, we also made private label productions.

EKOMILLE: OUR SHOWPIECE

Ekomille, today the protagonist of a whole line of products, is a unique device of its kind.

Perfect combination of technology and sustainability, it guarantees an ecological rodent control and at the same time an optimization of time of inspection on sites of pest control operator thanks to remote control. With the first Ekomille, we managed to propose an alternative to the traditional methods of rodent control introducing, for the first time in the panorama of Pest Control, the concept of **ecological rodent control and animal friendly**.

The solution we offer in product terms answer, anticipating its features, to a cultural change that is taking place.

We are in the market of Pest Control for over 20 years.

Over time we have expanded and developed the range of references produced and distributed with the aim of responding to the needs of our customers. Ensure high quality service, with constant attention to the customer satisfaction, is the goal that each of us, every day, pursues with passion and determination.

As part of the strategies aimed at encouraging the evolution of innovative solutions with high technological value, there is the value attributed to scientific research, for us, an essential pillar.

This is the foundation for the development of our core products, now internationally recognized as products of excellence.

RELIABILITY

COMPETENCE

People, their skills, in a word human capital, they represent our driving force, the bet we choose never to give up. This value translates into services consulting and training regularly active and available of our customers with the purpose of optimizing their performance and make them autonomous in the management of interventions.

INNOVATION

If it is true that the concept of environmental education has begun to take hold already in the last decades of the old millennium, it is equally true that introducing it in the general market and in the pest control market in particular was a brave undertaking in which only a few have come across it. In 2001, in advance for the times, we were able to propose an alternative to traditional rodent control methods by introducing, for the very first time, the concept of ecological and animal friendly rodent control.

SUSTAINABILITY OF ENVIRONMENTAL

OUR DISTRIBUTORS

OUR OFFICES AND OUR DISTRIBUTORS

Besides working closely together with our direct offices located in Spain and Romania, we are present on the international market thanks to consolidated partnerships with **the most important distributors in Europe, America, Africa, Asia and Oceania.**

This has allowed us, over time, to greatly enlarge our presence area and above all of strengthen the good name of Made in Italy in the international market.

OUR CORE LINES

Sistema Eko is the line of products and accessories related to the **Ekomille** world, the electromechanical equipment for the continuous and effective capture of all species of synanthropic rodents and number one in the market of ecological rodent control. The products of the line are designed to optimize the use of devices, harmonizing their presence in green spaces and protecting them from any tampering when employed in public areas.

Ekontrol, co-star with Ekomille of the Eko System line, is the device universal that allows you to remotely control all rodent control devices in a simple and immediate way. Continuous data monitoring related to catches and detection of any rodent passages allows to manage the rodent control stations efficiently and in real time reducing the interventions on sites by the operators. It can be used, as well as with the rodent devices of Eko System, in synergy with all the rodent devices on the market including multi-capture traps and safety stations or in *stand-alone* mode.

Tak is a line of glueboards and glue traps for the control of insects and rodents pests, entirely produced by Ekocommerce. The technical world "tack", from which the name of the brand originates, translates the ability of a glue to adhere to an object even through pressure very light. The choice to associate the line name with this feature follows the choice of field made by Ekocommerce: guarantee high quality standards and bring high the name of *Made in Italy*.

UV light traps are the most used tool for monitor pest flies and other types of flying insect populations in areas of food production and preparation. Scientific studies have shown that the color of glue panels has a strong impact on the effectiveness of traps. After years of research, **Flux** is born, the new line of gluetraps for UV traps, unique and patented, capable of attract and trap up to 180% more flies and other flying insects than other yellow glueboards of the same size.

Launched in the market of Pest Control to complement and improve our range of ecological products with low environmental impact, the line of UV traps **Klight** is today a benchmark in the category market. The line, produced and distributed by Ekocommerce, guarantees the quality of *Made in Italy* combining the values of research and development, environmental sustainability and design. Composed of three different collections, each designed for a specific target, Klight meets the needs dictated by the regulations in force to ensure safety and hygiene in the environments of the Ho.Re.Ca. channel, in the food industries, processing areas, workplaces and in environments at risk of explosion.

EKOMMERCE
IPM SOLUTIONS

OUR OFFER

With the aim of offering a complete range of solutions and customized programs based on the needs and peculiarities of our customers, our offer includes market-leading products of which we are distributors.

In fact, there are numerous partnerships with the *best players* on the market, built with the aim of guaranteeing standards of excellence for our customers.

EKOLOGICAL RODENT SYSTEM

EKOMILLE

Ekomille is an electromechanical equipment for the capture, continuous and effective, of all species of rodent pests (mice and rats). Thanks to its characteristics it ensures hygiene, safety and ecology. The result of years of study and research, with almost twenty years' experience certified, the equipment is operated in a natural way without the use of poisons or harmful, but taking advantage of the ethology of pests. The rodent, attracted by natural priming, is captured instantly just trying to eat. Sensitive electromechanical devices allow immediate catch, multiple and continuous.

There are three functional principles:

PRIMING FOOD: Unparalleled and guaranteed by the use of natural substances available in 16 rooms bait. Thanks to these properties, Ekomille allows to make strategy choices of food priming unique in its kind.

STRUCTURAL PRIMING: The device is appreciated as a safe environment and then as a place in which the rodents atmosphere its lair and its shelter.

HUMAN FACTOR: The PCO, through the use of the Eko System line, is able to express its full potential, in terms of image and professional competence, thanks to the possibility of being able to use a technology that makes objective and transparent the result of its operating activities.

The advantages of Ekomille are numerous:

- **Ecological** because it does not use poisons
- **Safe** because it is safe for children, non-target animals and in the workplace
- **Hygienic** because it does not disperse infected carcasses in the environment and complies with HACCP standards
- **Ethological** because it exploits the behavior of rodents for their capture
- **Ethical** because compared to the other rodent control and glue methods, it represents the rodent suppression system that causes less suffering
- **Multifunctional** because it is suitable for any environment, interior, exterior, floor or suspended
- **Easy** because after installation, limited periodic checks are required
- **Versatile** because it can also be used for prevention and monitoring activities
- **Efficient** because it carries out mass trapping, containing up to 80 rodents in the specific tank
- **Effective** because it captures all 3 main species of weed rodents without distinction

EKOMILLE RC

Ekomille, the electromechanical multicapture device for ecological rodent control, combined with the power of the **Ekontrol** system, the remote rodent control device, becomes **Ekomille RC**, the digital device with continuous capture for pest rodents completely manageable from remote. Ekomille RC is the new landmark in ecological rodent control.

The remote-control functions combined with its features guarantee hygiene and safety and make it the most advanced and safe tool for the continuous capture of mice and rats.

The Ekontrol system integrated in the device allows you to comfortably manage all the most important parameters and tools of Ekomille RC wherever you are.

The integrated control system

Totally independent, it does not require control units or external connection devices. Once placed, it is ready for use. Through the web app it is possible to check the status of the device and the messages received through an extremely intuitive symbol system. Ekomille RC, Ekomille upgrade, is equipped with an **integrated control system** that allows you to activate the captures, check the life status of the machine and the percentage of battery charge, the verticality of the machine, blocking of the impeller as well as monitoring, in real time and with the option of receiving notifications via email, the number of catches or the passage of rodents.

Access to the platform can be granted not only to technical operators, but also to their customers, if authorized.

Finally, an effective system of statistics allows the extraction of reports on the status of the devices and the number of data carried out in a specific interval of time, with groupings by customers or even by individual sites.

Dimensions (mm): w 330 xd 440 x h 630

8551CD	CHARGER 2 BATTERY SLOT	1 PC
8551CQ	CHARGER 4 BATTERY SLOT	1 PC

TRAP ACTIVATION

Activate or deactivate the trapdoor remotely and quickly switch between monitoring and capturing

CAPTURE

Check and receive notifications whenever the trap is triggered

CONTACT WITH THE BAIT

With the trapdoor closed, it checks the effectiveness of the bait by checking the passage of the rodents

BATTERY STATUS

Check the battery charge level in real time: you will receive a notification when it drops below the preset threshold

TRAP DOOR BLOCK

No more Ekomille inactive: an instant warning message if the trapdoor is blocked

OVERTURNING

Be careful of the unexpected: if the device is damaged or overturned, you will know immediately

EKOMILLE CO₂

Ekommerce is very sensitive to **animal welfare**, for this reason we decided to introduce **a new system of suppression** that is more efficient, able to respect to the most strict regulation, in order to **avoid unnecessary suffering to animals**.

CO₂ is odorless, colorless, non-flammable, non-explosive and heavier than air.

When used in Ekomille, CO₂ diffuses at the top of the bucket, in direct contact with the captured rodent; he **falls asleep**, he faints and immediately, completely unconscious, he is **painlessly suppressed**.

Death occurs by hypoxia, within a very **short time (<60 seconds)**, through depression of the central nervous system.

The concentration of CO₂ inside the **lower section of Ekomille is ensured greater than 60%**.

Ekomille CO₂ has same function of Ekomille with different suppression system.

Able to be used in all different sites: Indoors or outdoors, sensitive areas, and also risk of explosion areas.

Each bottle of CO₂ is able to make about 10 captures continuously. Easy to replace, thanks to the erogation system plug and play.

Dimensions (mm): w 330 x d 440 x h 630 mm

EKOLOGIC

Ekolagic is an ecological device for monitoring all species of rodent pests. Built with a solid structure in ABS plastic, it is used in monitoring activities, especially in the initial phase, in combination with the Ekomille to cover the entire area involved in rodent control. Do not make catches. Can be used in all the internal and external contexts of companies in the food industry chain, industries, public places and other environments open to the public. The natural bait kit (Ekofood 100 - code 2014) is supplied.

Dimensions (mm): w 330 x d 440 x h 370

EKONTROL

Ekontrol is an integrated remote control system for monitoring pest rodents, which thanks to a powerful web platform allows real-time monitoring of rodent control stations from any part of the world, at any time, by the PCO professional and the Customer user.

Ekontrol consists of two parts:

HARDWARE: In line with quality standards, the hardware system is made of ABS plastic and electronic components. Equipped with a PIR sensor that detects passage and/or capture of rodent pests and a GSM/GPRS Quad-Band 850/900/1800/1900 MHz system that allows data transmission to the web server. It is able to provide information on battery status, on/off, daily life status, captures/passages. Equipped with 2600 mAh rechargeable lithium battery with an average life of 3 months. Power on/off by magnet.

SOFTWARE: The software is a web platform accessible from PC, smartphone, tablet, without download and accessible from anywhere in the world via credentials. All detection data can be exported in Excel and customizable graphic files.

It can be installed on rodent control devices and in "Free" mode near sensitive access points, such as cable ducts, electrical cabins, floating floors, false ceilings.

Ekontrol is supplied complete with: detection device, microsim card, 1 lithium battery, 1 magnet, 1 double-sided adhesive

EKOBLOCK & EKOBLOCK FIXING

Ekobox A is the inspectable cover for the Ekomille device and Ekologic monitoring device. It is characterized by a completely closed structure: closed floor with system for fixing to the ground, perforated roof, 3 fixed walls and front door with flap opening to simplify the control operations. The door is equipped with holes for closing with padlocks (supplied) and window for rapid control of the Ekomille counter. On the walls there are 3 entry holes for mice and rats (one per wall). Made of painted metal. Equipped with a practical front flap door. Ideal for industrial and civil environments to protect capture and monitoring equipment, against non-target animals, theft, vandalism and curious non-experts. Comes disassembled with instructions. Available in two colors: cream and green. Padlock with code supplied.

Dimensions (mm): Ekobox (A) w 550 x d 410 x h 735

EKOPARK

Ekopark is an inspectable cover for Ekomille and Ekologic designed for urban outdoor environments. Made with an aluminum structure and treated wood, it is perfect for being discreetly integrated into urban and civil furnishings, such as parks and gardens. It guarantees protection against no-target animals, theft, tampering and vandalism. Padlock with code supplied. It can be supplied complete with Ekomille (code 2001PARK - Ekologic Island).

EKOFIX 100

Ekofix 100, is a concentrated flavored odor control liquid. It is a specifically designed, tested sanitizing and desodorising liquid mixture designed to be used effectively in the Ekomille. The product, supplied concentrated, is in liquid solution, with an identifying green color and a characteristic almond aroma. For use dilute the contents of the 5 liters tank inside the lower section of Ekomille and add about 13 liters of water, until reaching the level of the solution between the linear indicators on the internal side walls of the section.

Packaging: double corrugated cardboard box containing 3 of 5 liters tanks each (total 15 liters of concentrated liquid).

FLY CONTROL SYSTEM

Klight
UV TRAPS

KLIGHT, GLUEBOARD UV TRAPS

Klight is the brand of UV traps with glueboard for professional use, the most suitable tool for capturing and monitoring internal areas infested by flying insects, such as flies, midges, wasps, food moths, etc.

Klight includes many models depending on the environment in which they are used:

KILLED is the new range of UV LED traps for professional use in Ho.Re.Ca. or front office environments.

INDUSTRIAL Line incorporates UV traps with important design and high-performance technical features, suitable for use in industrial contexts such as food factories, processing and preparation areas and wet environments.

COMMERCIAL Line, on the other hand, contains models of UV traps whose technical characteristics allow their use in environments such as warehouses, storage areas and technical areas open to the public.

HO.RE.CA. Line is the line created to identify UV traps that, in addition to being highly performing, can be suitable for use in Ho.Re.Ca. and front office environments, such as restaurants, hotel lobbies, dining rooms, etc.

WE CREATE YOUR UV TRAP

Ekommerce is able to realize **customized UV traps** production, already from small production lots (50 MOQ).

Customizations can be made on models already in production or customized models can be developed and designed **exclusively for the customer's use and design**, in collaboration with our designers and technical staff.

POSITIONING SUGGESTION

- Recommend enough units to cover the entire area to be protected
- Install units away from sources of light competition, such as windows, doors and lighting equipment
- Install at an average height of 2 meters from the ground
- In positioning, make sure that there are no visual barriers that hinder the visibility of the entire monitored area
- Continuous 24/7 operation is recommended
- For monitoring in technical areas, place near potential entry points so as to intercept flying insects before reach the sensitive areas
- For monitoring in processing areas, place away from preparation points

FOOD LED

FOOD LED is a UV LED wall trap for the capture and monitoring of flying insects, such as flies, etc., ideal for environments open to the public. Very simple and discreet design and useful for fast maintenance operations. The front door can be opened easily and completely, favoring the activity of replacing glueboard and UV led lamp.

Optimized UV spectrum for maximum insect attraction. Energy saving of 75% compared to the fluorescent version. Real life of the lamps over 2 years.

The model is in steel painted with white powders.

PRO

PRO is the line of UV traps for professional use with glue board for the capture and monitoring of flying insects. The frame is in stainless steel or white powder coated steel, ideal for industrial environments.

The UV PRO traps can be installed in many different ways depending on the need: they can be fixed to the wall, or suspended from the ceiling (a maximum height of 2 m is recommended), they are multi-position traps and thanks to the minimal design, they guarantee wide diffusion of UV light and easy maintenance when replacing glueboards and UV tubes.

X30

X30 is the UV trap with glueboard for capturing and monitoring flying insects in general such as gnats, flies etc. Made of stainless-steel in its front part and the back-frame part in powder coated steel. Its compact and modern design has been designed to make it perfectly integrated in contexts such as industrial kitchens. Can be positioned on the wall. It is characterized by its front cover, whose central part can be rotated to allow practical and easy maintenance when changing consumables, but it is also removable to increase its attractiveness. The glueboard is inserted from the top.

DUPLO 45

DUPLO 45 is a UV trap model characterized by a modern and discreet design, ideal for areas open to the public. Equipped with a solid and slim structure with a depth of only 6,5 cm. It is also characterized by its double glueboard insertion system, possible both laterally and from above. The front door can be easily opened thanks to the locking system with lever, which allows a practical and quick maintenance. The UV lamps are three that increase the attractive power, but it is possible to alternatively decide to turn them on individually. The frame is in steel painted with white powders.

Consumables:

Coverage (m²): 120

Dimensions (mm): w 470 x d 80 x h 300

Tubes: 3 x 15 Watt

GLUE TWIN P

Glue Twin is a hazelnut flavored stretched plastic glue trap for monitoring and capturing crawling insects and *Mus musculus domesticus* for indoors and outdoors. The trap can be used open on its own or can be used inside a multi-catch traps and bait stations (such as DUO Control Station, Hard Rat Inox and Evo). In stretched plastic with flavored glue, is perfect for use in environments with high humidity or outdoors inside multi-catch and other pest control devices. Disposable trap.

Dimensions (mm): w 240 x h 100

CODE	PRODUCT	PACKAGING
3136	GLUE TWIN P	100 PCS

GLUE TWIN MAX

Glue Twin is a hazelnut flavored glue trap for monitoring and capturing crawling insects, *Mus musculus domesticus* and *Rattus rattus* for indoors. The trap can be used open on its own or can be used inside a multi-catch traps and bait stations (such as DUO Control Station, Hard Rat Inox and Evo). It can also be closed in a shape of a tunnel (also called a “little house”) and positioned in the places to be monitored. Thanks to the high quantities of glue and larger size, is able to capture more species of pests. Disposable

Dimensions (mm): w 217 x h 137

CODE	PRODUCT	PACKAGING
3137	GLUE TWIN MAX	100 PCS

VASTRAP

Vastrap is the trap in a tray with flavored glue, designed for wet environments or for environments with presence of water. It can be used alone, it can be protected with the special Tunnel (code 4383) or even used inside dispenser as DUO Control Station (codes 8038, 8060, 8097, 8387). In thermo-formed plastic material with 40 grams of flavored glue per tray. Used for capture and monitoring of rodents infesting Rats (*Rattus rattus*, *Rattus norvegicus*), mice (*Mus musculus domesticus*) and crawling insects.

Dimensions (mm): w 250 x h 120

CODE	PRODUCT	PACKAGING
4382	VASTRAP (BLACK COLOR)	100 PCS
4385	VASTRAP (WHITE COLOR)	100 PCS

TUNNEL FOR VASTRAP

Tunnel for Vastrap is a tunnel to protect the Vastrap gluetraps designed for wet environments or for environments with presence of water. In thermo-formed plastic material, black colour.

Dimensions (mm): w 250 x d 120 x h 80

CODE	PRODUCT	PACKAGING
4383	TUNNEL FOR VASTRAP	100 PCS

PROGLUE INSECTS

Proglue is a range of aromatic glue trap for monitoring and capturing of indoors pests. Can be used alone or inside bait stations. Proglue insects is specific for monitoring and capturing crawling pests indoors. Disposable trap.

Dimensions (mm): w 155 x h 100

CODE	PRODUCT	PACKAGING
6004S	PROGLUE INSECTS	100 PCS

PROGLUE HG

Proglue is a range of aromatic glue trap for monitoring and capturing of indoors pests. Can be used alone or inside bait stations. Proglue HG is specific for monitoring and capturing crawling pests and *Mus musculus domesticus* indoors.

Dimensions (mm): w 155 x h 100

CODE	PRODUCT	PACKAGING
6004HG	PROGLUE HG	100 PCS

PEST MONITORING SYSTEM

MINI GLUE

Mini Glue is a glue floved cardboard trap for monitoring and capturing crawling insects. Specific for indoors. Disposable trap.

Dimensions (mm): w 53 x h 78

CODE	PRODUCT	PACKAGING
4302S	MINI GLUE	700 PCS

BLATRAP

Blatrap is a glue trap with a specific food aroma for indoors capturing and monitoring of cockroaches, crawling insects and various food pest infestations. Target pest are: cockroaches, crawling insects in general (eg silver fish), beetles (eg. carabites, tenebrionids) and food pest infestants (eg Lasioderma serricorne, Tenebrio molitor, etc.).

The trap configuration allows positioning horizontally and vertically, in small spaces under and behind the furniture. The openings allow easy and quick access for pests and protect the glue surface from dust. Possibility to configure the trap with 2 different heights. The glue surface is with food flavoring already integrated in then glue, easy to assemble and use. To increase the priming capacity, it is possible to integrate with an attractive pad (code 3419 on request). Can be used alone or inside safety dispensers by simply removing large wings and bending small wings inside. Disposable trap. Indoor use.

Dimensions (mm): w 180 x d 100 x h 28 (high)
w 180 x d 100 x h 20 (low)

CODE	PRODUCT	PACKAGING
3213	BLATRAP MINI	200 PCS
3423	ATTRACTANT IN TABLETS	50 PCS

DROSTRAP

Drostrap is a glue trap for fruit flies. In cardboard with glue, needs to be activated with a specific pheromone (not included). Employed for the monitoring and capture of *Drosophila spp.* in environments such as kitchens, bars and supermarkets.

The luring effect has a double system, optical thanks to the specific "fluorescent yellow" color, and by the attractive of specific pheromone (not included). Small and discreet, it catches insects by hiding them discreetly.

Dimensions (mm): w 320 x h 120

CODE	PRODUCT	PACKAGING
7630	DROSTRAP	120 PCS

ZEBRATRAPP

Zebtratrapp is a glue trap for anobids and food moths. It is characterized by its cardboard with external graphics with slanted white and black stripes which increases its attractive power. The internal glue surface is white. Used for monitoring food processing and storage areas. It can be positioned on a horizontal or suspended surface. Activation with specific pheromone (not supplied) - see pheromone table.

Plodia interpunctella / Ephestia spp. (cod. 3129 - 3129LL), *Sitotroga cerealella* (cod. 3133), *Tinea granella* (cod. 4298), *Lasioderma serricorne* (cod. 3132), *Stegobium paniceum* (cod. 4297). Disposable trap.

Dimensions (mm): w 133 x d 90 x h 122 (ready to use)

CODE	PRODUCT	PACKAGING
8550	ZEBRATRAPP	120 PCS

ZEBRATRAPP MOTH

Zebtratrapp is a glue trap for anobids, food moths and clothes moth. It is characterized by its cardboard with external graphics with slanted white and black stripes which increases its attractive power. Used for monitoring food processing and storage areas. It can be positioned on a wall or suspended surface. Thin in order to be used in harsh environments subject to damage such as warehouses. Activation with specific pheromone (not included) - see pheromone table.

Disposable trap.

Dimensions (mm): w 155 x d 100 x h 40

CODE	PRODUCT	PACKAGING
8576	ZEBRATRAPP MOTH	120 PCS

ASIAN TRAP

Asian trap is a glue plastic trap for brown marmorated stink bug. Can be used for monitoring and capturing of brown marmorated stink bug. Easy to use, strong and durable. In neutral alveolar plastic material. Included laces for hanging and specific pheromone (not included). Small and discreet, it catches insects by hiding them discreetly.

Dimensions (mm): w 250 x h 160

CODE	PRODUCT	PACKAGING
8588	ASIAN TRAP	3 PCS
8589	ASIAN PHEROMONE DISPENSER	5 PCS

OLITRAP

Olitrapp is a Glue trap support for *Diptera Tephritidae* in alveolar plastic material. Used for monitoring the olive fly or fruit fly. To be used in crop fields or vegetable gardens. Double enticing effect: optical thanks to the yellow color, and through pheromonic attractant.

Dimensions (mm): w 264 x d 150 x h 115

CODE	PRODUCT	PACKAGING
7107	OLITRAP	10 PCS
7108	GLUEBOARD FOR REFILL	150 PCS

FUNNEL TRAP

It is a funnel trap with a rigid plastic body. Used for monitoring food insects. Specific for use in processing and storage areas. Equipped with a pheromone storage roof that facilitates its protection and prevents accidental falls into the trap. Internal glueboard can also be used. Reusable and suitable for use in dusty environments. To be specified with pheromone (not included).

Dimensions (mm): w 170 x h 225

CODE	PRODUCT	PACKAGING
3024GYC	FUNNEL TRAP	10 PCS

PHEROK

Pherok is a wide range of different pheromone dispensers, all of each hold and release the active ingredient into the atmosphere in a controlled way. Different option of dispensers are available and have different properties and are suitable for specific pests.

EVO CONTROL STATION

EVO Control Station is a versatile and functional device for the control of rodents and crawling insects. In black polypropylene plastic. In full compliance with the Integrated Pest Management philosophy, EVO has been designed to manage both pest rodents and the most common infesting crawling insects, such as cockroaches and ants, with a single device with different and complementary methods. Equipped with practical side opening of the lid with a single locking system, which reduce the station's opening times. The reinforced closure compared to other similar models increases safety in use in sensitive environments. Furthermore, the presence of an interlocking cap for closing and hiding the lock reduces the possibility of opening the EVO Control Station by non-experts.

Multiple features:

- rodenticide bait dispenser and virtual baits of any physical form
- gel bait dispenser for cockroach and ants' control
- trap for rats or mice with large or small Snap Trap
- mousetrap with one or two Vastrap glue traps
- mousetrap with Glue Twin glue trap closed to house
- trap for crawling insects with 2 Mini Blatrap joined and closed to house
- rodent presence control with Ekontrol system positioned inside

Evo is supplied with: internal tray, metal bait-holder pin, support for wall fixing, key for opening and cap for covering the lock.

Dimensions (mm): w 235 x d 185 x h 110 (with cap)
w 235 x d 185 x h 105 (without cap)

7501	WITH TRANSPARENT LID	20 PCS

DUO CONTROL STATION

DUO Control Station is a plastic control station (reinforced polypropylene) for the control of rodent pests, such as *Rattus rattus*, *Rattus norvegicus*, *Mus musculus domesticus*. It can be used as a dispenser for rodenticide baits or as a safety dispenser for glue traps such as Glue Twin (code 3135) and Vastrap (code 4382). Usable in indoor and outdoor areas in civil, domestic, industrial and zootechnical areas. It is equipped with a practical internal removable tray complete with bait pins and key lock. Can be positioned on the wall with an exclusive system or on a pale with a plastic clamp.

Available with customized color on request (MOQ 1248 pcs). It is also customizable with logo printing (MOQ 504 pcs).

Optional DUO Control Station:

Can be customized with color and company. Logo on request!

Dimensions (mm): w 305 x d 157 x h 705
Ø entry hole 5 cm

T-RAT

T-RAT is the inverted T-shaped safety dispenser for the control of rodent pests, such as *Rattus rattus*, *Rattus norvegicus*, *Mus musculus domesticus*. It is a rodenticide bait dispenser in reinforced polypropylene plastic with high strength and resistance, equipped with a double lock with Torx anti-screw, designed to be used in indoor and outdoor areas in civil, domestic, industrial and zootechnical environments. It can be positioned on the wall with the supplied plug, or on a pole with a plastic clamp. It is supplied complete with a steel bait-bearing pin hooked to the cover, 120 x 5 mm screws with anchors for fixing to the wall. It can be made in custom color (MOQ 1000 pcs).

Dimensions (mm): w 335 x d 75 x h 280
 Ø entry hole 7 cm

8130	T-RAT GREY COLOR	25 PCS

HARD RAT

HARD RAT is a stainless-steel safety dispenser for the control of rodent pests: *Rattus rattus*, *Rattus norvegicus*, *Mus musculus domesticus*. Particularly suitable for external and internal areas at risk of tampering. It can be positioned on the wall or on the floor with supplied plugs, on a pole with a jumper or clamp. Its shape is polygonal, very robust, equipped with a locking system with a hexagonal screw, a vertical bait-holder pin incorporated in the practical pull-out tray, usable with both Vastrap (code 7090) and Glue Twin closed to house (code 3135).

Dimensions (mm): w 300 x d 85 x h 80
 Ø entry hole 5 cm

EQUIPMENTS

EKOXY3

Ekoxy3 is the range of ozone generators for ecological disinfection. Thanks to the patented filter system that purifies the intake air, ozone emission is optimized and no other potentially dangerous elements are generated. Ekoxy3 is indicated for the treatment of air and surfaces for the elimination of viruses and bacteria in any type of environment (civil, industrial, food, public, health). Can be used for: air disinfection; disinfection of surfaces intended for contact with food; water disinfection of aqueducts, swimming pools and for bottling; disinfection of fruit and vegetables from mold and yeast spores; deodorizing of environments. Ekoxy3 sucks in air, purifies it through the special patented filter, then generates ozone and injects it into the environment. Ozone, thanks to its oxidizing capacity, disinfects the environment and, as unstable by nature, spontaneously converts back to oxygen without leaving toxic-harmful residues.

EKOXY3-25

Technical data: Ozone production 1 g/h ambient air 20°C/50%Rh; Air/ozone flow 45 m³/h
Ozone concentration 25 PPM
quantity of recharge filter 410 g

Dimension (mm): w 320 x d 330 x h 120

8554	EKOXY3-50	1 PC

COLD ZONE

Cold Zone is the range of equipment for crio-disinfestation. It is a professional system designed for ecological treatments in indoor environments (eg. hotels, hospitals, schools, transport vehicles, homes, etc.) against crawling pest insects and in particular against bloodsucking insects (eg the bedbug). Its structure is in stainless-steel with different storage capacity of the tank (30 L and 50 L). Killing action, adulticide, ovicidal and non-residual, acts by thermal shock from contact. It is ideal for insects nestled in tissues, electrical outlets and cracks that are difficult to reach. Many other accessories available upon request.

COLD ZONE 30

Tank capacity: 30 L

Dimension (mm): Ø 35 x h 920 45 x h 87

*supplied: Coil kit 2 m; launches (code 8235); direct jet nozzle (2 L/min - code 8239); coil and filler connection (code 8350).

COMPACT AEROSOL

Compact Aerosol is the ULV (Ultra Low Volume) portable nebulizer for large environments. It is a compact, lightweight device made entirely of stainless-steel. It can be placed anywhere thanks to the two wheels provided and, despite its small size, it boasts a tank with over 20 L capacity. For operation only access to a compressed air network or connection to a 250 L/min compressor is required. High versatility, allows use in multiple environments, with coverage up to 30,000 m³, also thanks to the two nozzles oriented at 45°. Easy to maintain thanks to the absence of worn gaskets. Equipped with 2 wheels and carrying handle, 2 ULV nozzles, 1 water supply faucet, 1 faucet for washing, 2 pressure reducers, 1 air pressure gauge, 1 liquid pressure gauge, quick coupling for Rilsan hose 0,8 mm. It is able to work at a pressure between 1 and 5 bar.

Dimensions (mm): w 330 x h 800

EQUIPMENTS

EKOFOG

Ekofog is a electric thermal fogger, ideal for disinfestation, disinfection and deodorization of industries, warehouses, food storage, stables, farms, silos, sewers, air conditioning ducts, etc. The particles produced by the thermo-humidifier have a diameter of very few microns and form a uniform dispersion in the environment even of vast cubature, determining a very effective and economic action compared to other systems, with a limited amount of product used. It is equipped with on electronic temperature system that guarantees constant stability, and is equipped with a control panel to regulate the emission of fog. Convenient to move thanks to its compactness, the practical handle and the weight of only 13 kg. On request it can be equipped with 4 wheels that make it even easier to move and use.

Maximum boiler power: 1.500 Watt
Maximum turbine power: 1.600 Watt
Electric voltage: 230 Volt
Frequency: 50 Hz
Protection: IP44
Preheating time: circa 7 min
 Max fluid consumption: **100 ml/min**
Average fluid consumption: 30 ml/min
Operating conditions: 5°C 7 45°C
 (with less than 80% relative humidity)
Dimension (mm): w 270 x d 250 x h 475

BIRD MANAGEMENT SYSTEM

BMS
BIRD MANAGEMENT SENSORY

SCUDO BIRDS

Scudo Birds is a ecological, gel for birds control, made up of a mix of natural substances extracted from plants, fats and capsaicin. Ideal for removing pest birds, such as pigeons, starlings, crows, seagulls and small and medium-sized birds. To be applied on internal and external surfaces of adjacent buildings and structures (eg. cornices, roofs, window sills, statues, monuments, etc.). at a distance of about 10-25 cm, a quantity of 20 g of product from pour onto the special trays supplied. The quantity of a cartridge covers about 3,5 m/linear.

8451WKIT	AVORY COLOUR CARTRIDGE 280 G + 15 TRAYS	12 PCS
8451SKIT	SILVER COLOUR CARTRIDGE 280 G + 15 TRAYS	12 PCS

SCUDO CALL CITY

Scudo Call City is a sound-digital bollard created for the removal of pest birds in a bloodless and ecological way. It is based on the issue of “alarm cries” of problematic bird species, recorded by ornithologists on high quality digital tracks of absolute sound purity. The cries of alarm are the same that the species of birds to be removed emit in nature when they are afraid. Works with mains power or with a 12 Volts battery. It has an adjustable twilight sensor that allows it to operate automatically during daylight hours, deactivating it after sunset. The operating and pause times are already set following ornithological evidence, however it is possible to modify them by following the instructions. Sound power allows it to be perceived by birds even from a great distance. Supplied with: n. 1 sound player, n. 1 cable with power supply, n. 1 power cable with battery terminals and n. 1 protective plastic cover.

Technical data: 30 Watt internal speaker

3,5 mm mono jack socket for external speaker (up to 30 watts)

Active speaker selection (INTERNAL | INTERNAL + EXTERNAL | EXTERNAL)

Memory capacity: 8 songs

Personalization of operating time and pause time (from 30 seconds to 30 minutes)

Random function with random times • LDR light sensor • Light sensor sensitivity adjustment • Daily or continuous operation • Display brightness adjustment

External power supply: 12 Volts

Power supply DC: 5,5 x 2,1 mm

Weight: 265 g

Dimension (mm): w 700 x d 700 x h 450

EKO INFORMS

EKO Informs

Electromechanical device for the continuous capture of synanthropic rodents

The result of over **20 years of experience** in the field, Ekomille was designed after careful observation of the biology and ethology of rodents. **Undisputed number one in the ecological rodent control market.** Ekomille is, in addition, the first patented capture device for rodents from an **ecological and animal friendly perspective.** Thanks to its characteristics, it allows **hygienic, safe and environmentally friendly rodent control.**

Ecological

Ekomille performs its function without the use of chemical baits. There is not dispersion of persistent poisonous substances, toxic and bioaccumulative. It preserves the health of humans, non-target animals (both domestic and wild) and the environment.

Safe

By retaining the carcasses in the bucket, it guarantees safe and hygienic control of rodents, preventing the risk of spread serious pathogenic microorganisms deriving from the dispersion of poisoned carcasses.

Where the Ekomille rodent control system can be used?

- 1. Food companies
- 2. Animal husbandry
- 3. Municipalities
- 4. Hospitals, private clinics and welfare organizations
- 5. Companies with personnel presence
- 6. Residential and public contexts frequented by children

Animal friendly

Ekomille was born as a capture system. The suppression of the pest is an optional choice of the exterminator. In fact, it is possible to carry out live captures, without causing any stress or pain to the trapped rodents. Its integrated mechanics, without adding any liquid inside the tank, allows animals to be retained which, at a later time, can be released in nature.

OPERATION

1 STEP	 FOOD PRIMING	The device is placed in off position. The explorer rat, attracted by the food baits, enters into the device to feed and then returns to the den and shares the new refreshment point identified with the colony.
2 STEP	 CAPTURE OF RODENT	Once the exploration phase of the rodent is completed, the operator can turn on the device. From this moment on, whenever the rodent tries to feed from the central feeder, the capture takes place.
3 STEP	 CONTAINMENT OF CARCASSES	Trapped rodents are kept in the lower section of the device, so there is no risk of secondary environmental contamination.

The first digital continuous capture device for synanthropic rodents with an integrated control system

Fully manageable remotely via a dedicated web platform

Activate or deactivate the device

Check the battery status

Check the alarms

Count the catches and passages of rodents

Ekomille RC, an upgrade of Ekomille, is the first continuous capture digital device for synanthropic rodents equipped with an integrated control system that allows remote and real-time management of rodent control.

The remote-control abilities combined with those of Ekomille, make Ekomille RC the **most advanced and safe** tool for the continuous capture of mice and rats.

Access to the platform can be allowed not only to technicians, but also to their customers, if authorized.

An effective statistics system allows the extraction of reports on the status of the devices and on the number of surveys carried out by time interval, groups of customers or individual sites.

Totally autonomous, it does not require control units or external connection devices. **Once positioned, it is ready for use.** Through the web app it is possible to check the status of the device and the messages received through an extremely intuitive icon system.

STRONG POINTS

Ecological and hygienic

ONLY NATURAL ATTRACTANT

NO DISPERSION OF THE CARCASSES IN THE ENVIRONMENT

Safe

NO USE OF POISONS AND TOXIC SUBSTANCES

SAFE FOR NON-TARGET ANIMALS

Remotely manageable

FULLY REMOTE CONTROLLABLE

Animal friendly

IT IS POSSIBLE TO RELEASE PEST RODENTS AFTER CATCHING

VALUE TO YOUR WORK

The benefit coming from the use of Ekomille RC, in addition to the optimization of resources and the reducing of interventions on sites, is the enhancement of the intervention of the operator who, through the integrated control system thanks to which it is possible to monitor the results of his work, expresses its technical potential, in terms of image and professional competence.

Electromechanical device for the management of pest rodents, integrated with a quick and painless suppression system with carbon dioxide

What do you need to know about Ekomille CO₂

Ekomille CO₂, the latest addition to the "Eko System" family, combines the extraordinary capabilities of Ekomille with a **rapid and infallible suppression system that exploits the biocidal potential of carbon dioxide.**

1

Ekomille CO₂ is considered a low risk Biocide-Rodenticide, since it carries carbon dioxide for food use. Exactly, the same that is used in the preparation of mineral waters and carbonated soft drinks!

2

Ekomille CO₂ DOES NOT CONTRIBUTE to increase carbon dioxide in the atmosphere, but, using the volcanic CO₂ naturally produced by the planet, **it exploits it to suppress potentially harmful rodents in a humane, rapid way and without inducing any suffering.**

3

Ekomille CO₂ is the best performing system for the capture and painless suppression of rodents in the world.

4

With Ekomille CO₂ the death of infesting rodents occurs in a state of unconsciousness and in a period of time less than one minute.

OPERATION

Rodent catch

The rodent is trapped in the lower section of the device.

Function of the Ekofix

1. cushion of the fall of the rodent
2. reduce the volume of atmosphere to be saturated with CO₂
3. prevent the formation of bad odors

CO₂ supply

After the capture, the electromechanical system supplies a spray of carbon dioxide to the lower section of the device.

CO₂ over 60%

As a result of the supply of CO₂, an atmosphere with a carbon dioxide in the lower section has a concentration of more than 60%.

The time of suppression

The time that passes from the moment in which the rodent touches the sensor that activates the capture and death is about 30 seconds, never more than 60 seconds.

The use of carbon dioxide for the euthanasia suppression of rodents is widely documented in the international scientific literature, as well as already covered by the EU international legislation currently in force.

ekontrol

REMOTE MONITORING AND CONTROL

Universal device that allows remote control of rodent control inspection in a easy and immediate way without the use of external central control units.

The system consists of **detection devices** and a web app functional to the collection and continuous monitoring of the acquired data. Ekontrol allows you to manage the rodent control stations efficiently and in real time, significantly optimizing the time of inspection on site by operators.

These are the operations that can be carried out from remote:

01

Assign

Organize your sites and assign Ekontrol directly from your PC, tablet or smartphone

02

Place

Install Ekontrol on your rodent control stations or monitoring devices in sites

03

Check

It ensures continuous monitoring of data relating to catches and detection of the passage of rodents through notifications

04

Verify

Create custom reports and monitor Ekontrol status via simple and intuitive interface

TARGET PESTS

Brown rat
(*Rattus norvegicus*)

Black rat
(*Rattus rattus*)

House mouse
(*Mus musculus domesticus*)

Ekontrol can be used in synergy with all rodent control devices on the market. Its use is indicated when it is necessary to carry out rodent control inspection but also simply to detect the presence of pest rodents. In fact, it is possible to use it inside traps, safety dispensers or use it stand-alone.

How to use Ekontrol

Bait box station
Check the efficiency of baits

Multiple catch trap
Counts catches

Ekomille
Track the catches automatically

Ekologic
Check and count detections

Stand alone
Freely place it and detect passages

FLUX glueboard

The Flux line of glueboards guarantees, like no other product of the same category on the market, high performance in fast capturing flies and other flying insects.

The New Concept of glueboard

Produced by Ekommerce, together with the Tak glueproducts and as a completion of the Klight line of light UV traps, Flux was created as a result of **scientific studies**, conducted by the University of Molise, aimed to increase the effectiveness of the glue boards.

Currently the most commonly used glue boards are **yellow and black color**.

The **yellow** ones exploit the chromium-attractive component in order to have slightly higher performance in terms of capture, while the black ones are usually used to hide it from the view, overshadowing the technical aspects of the control instrument.

+180% FLUX IS ABLE TO ATTRACT AND TRAP UP TO 180% MORE TARGET PESTS THAN A YELLOW GLUE BOARD OF THE SAME SIZE

The incredible result is guaranteed by a high degree of reflectance of the panel obtained thanks to the application of **VERTICAL STRIPS** glue alternating with empty spaces

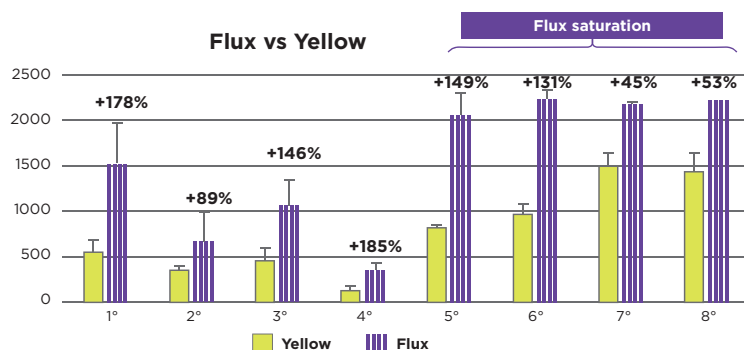

The peculiarity of the FLUX glueboard is the **LIGHT/DARK EFFECT** created by this exclusive strip coating technique and the consequent greater reflectivity in areas

This allows you to indulge the **NATURAL ATTITUDE OF THE FLY** to rest near the boundary line between the high/low light areas

The results obtained from the scientific study demonstrate the ability to control the populations of *Musca domestica* of UV traps does not depend only on the UV tubes used, as evidenced in numerous studies, but also on the characteristics of the glueboard.

Comparison of the number of catches of *Musca domestica* obtained through the use of the yellow glueboard and the Flux during test B. The percentages (%) indicate the growth rate of the white Flux plates compared to the yellow ones.

It can be said that the use of FLUX glueboards significantly increases the level of capture compared to the yellow or black ones, which are predominant in the market.

Source: Journal of Entomological and Acarological Research 2020.

TAK

GLUEBOARDS

The name Tak comes from one of the main properties attributed to the glue used in the production of glueboards and glue traps for the control of pests and rodents. The technical word Tack, in fact, translates the ability of a glue to stick to another object or body even through very light pressure.

This capacity is determined by the ability of the glue to rapidly "wet" the object it comes into contact with.

TARGET PESTS

-  **Brown rat**
(Rattus norvegicus)
-  **Black rat**
(Rattus rattus)
-  **House mouse**
(Mus musculus domesticus)
-  **Flying and crawling insects**

Versatility

Characterized by great versatility, the TAK devices, effective in the case of ordinary inspection of monitoring and control of insects and rodents, also meet the requirements indicated in the Integrated Pest Management (IPM) protocols usually adopted within complex structures of the agri-food factory.

Made in Italy

The careful selection of materials and the quality obtained through highly controlled production stages have proved to be successful and allow us today to bring the name of Made in Italy high abroad.

Private label production

Thanks to the wide range of products and production flexibility, it is possible for our customers to ask for private label lots with their company logo and design. This will allow you to increase the visibility of your brand. Our goal is to be the reference point for anyone who requires a high performance and at the same time customized product.

Quality of materials

The glues used meet the highest quality standards and are endowed with exceptional elasticity and resistance to the most varied environmental conditions. They do not dry out even if exposed to the air for a long time and have a high resistance to exposure to UV rays. The cardboard used is extremely resistant to moisture. The colors, obtained from vegetable sources and completely non-toxic, are the same used for the packaging of food products.

Klight

UV TRAPS

Launched in the Pest Control market to integrate and enrich the range of ecological products with low environmental impact signed by Ekommerce, the Klight line of UV light traps is today a point of reference for the market of this category.

THE LINE, PRODUCED AND DISTRIBUTED BY EKOMMERCE, GUARANTEES THE HIGH QUALITY STANDARDS OF MADE IN ITALY BY COMBINING IN ITSELF THE VALUES OF RESEARCH AND DEVELOPMENT, ENVIRONMENTAL SUSTAINABILITY AND DESIGN

Composed of three different collections, each of which designed for a specific areas, Klight responds to the needs dictated by the regulations aimed at guaranteeing safety and hygiene in the environments of the Ho.Re.Ca. channel, in the food industries, in the processing areas, in the workplaces and environments at risk of explosion.

INDUSTRIAL

COMMERCIAL

HO.RE.CA.

The adoption of Integrated Pest Management (IPM) protocols in the food industry will be increasingly widespread, given the need to significantly reduce chemical interventions for the control of flying pests. Among the monitoring systems most used in food production and storage areas, there are **UV Traps with glueboards**.

Such devices exploit the manifest positive phototropism of several species of arthropods. Eye recall, in fact, greatly influences their behavioral responses. Numerous contributions have been offered by scientific research in understanding how they work, in the development of such UV lighting devices and the interesting applications created in some agro-food factories.

ADVICE FOR CORRECT INSTALLATION

2 m

With the exception of some specific models whose use is indicated in external and humid environments, it is generally advisable to use the UV light traps indoors, making sure to install them at a height of about 2 m from the floor.

The number of traps must be congruent with the needs of the company and the critical points identified

The presence of obstacles between the device and the areas to be protected should be avoided as much as possible by checking that its UV light is visible from all points of the area

The devices must be in operation continuously

The UV traps can be fixed (to the wall, corner or ceiling) or placed as needed, with the help of the supplied accessories

By submitting an order for the purchase of Products (a "Purchase Order"), Buyer acknowledges and agrees to the following terms and conditions (the "Agreement"):

1. SELLER'S TERMS AND CONDITIONS - The following terms and conditions are deemed part of all quotations, acknowledgments, invoices, Purchase Orders and other documents, whether electronic or in writing, relating to the sale of goods or services ("Products") by EKOMMERCE SRL, a Italian company ("Seller") to Seller's customers ("Buyer"). These terms and conditions, together with Seller's quotation, order acknowledgement and invoice to a Purchase Order accepted by Seller, constitute the entire contract of sale and purchase between Seller and Buyer with respect to the Products covered by this Agreement, will supersede all previous communications, agreements or contracts, written or verbal between Seller and Buyer, and no understanding, agreement, term, condition or trade custom at variance herewith will be binding on Seller. In the event of a conflict between or among the terms of documents relating to the Products, the following order of priority will govern, except where the specific terms of a document provide otherwise: (a) any applicable order acknowledgment and invoice; (b) this Agreement; (c) the applicable quotation; and (d) the applicable Purchase Order. No waiver, amendment or modification of the terms and conditions hereof will be effective unless in writing and signed by an officer of Seller. SELLER OBJECTS TO, AND IS NOT BOUND BY, ANY TERMS OR CONDITIONS ON BUYER'S PURCHASE ORDER, CONFIRMATION FORMS OR OTHER DOCUMENTS, WHICH ATTEMPT TO IMPOSE UPON SELLER ANY TERMS AND CONDITIONS AT VARIANCE WITH SELLER'S TERMS AND CONDITIONS OF SALE SET FORTH HEREIN, AND SHIPMENT OR OTHER PERFORMANCE BY SELLER SHALL NOT CONSTITUTE ASSENT TO ANY SUCH INCONSISTENT TERMS.

2. QUOTATIONS - All quotations by Seller are subject to change or withdrawal without prior notice to Buyer unless otherwise specifically stated in the quotation. Quotations are made subject to approval by Seller of Buyer's credit. Seller shall have no obligation to sell or deliver Products covered by Seller's quotation unless and until Seller issues an order acknowledgement form or upon the shipment of Products by Seller.

3. TERMS OF PAYMENT - Unless otherwise expressly agreed to by Seller in writing, terms of payment are cash to be paid in advance before delivery from Seller's warehouse.

4. MINIMUM BILLING CHARGE - Seller shall not accept any Purchase Order for any Products or Services where the aggregate price for all Products listed thereon is less than 250,00€ exclusive of all taxes, shipping, insurance and other costs.

5. SHIPPING TERMS - Unless otherwise agreed in writing by the parties, deliveries of Products shall be made EXW Seller's facility in Atesa (CH), Italy. Buyer will be responsible for and shall assume all risk and liability for, and agrees to indemnify Seller for, all loss, damage or destruction of the Products, as well as the results of any use or misuse by third parties who may acquire or use the Products, after Seller's delivery of the same to the carrier. Any loss occasioned by damage or shrinkage in transit will be for Buyer's account, and Buyer shall file any damage or loss claims directly with the carrier. Unless otherwise agreed in writing by the parties, packaging methods, shipping documents and manner, route and carrier of shipment shall be at Seller's sole discretion. Seller reserves the right to ship items in a single or multiple shipments. Unless otherwise agreed in writing by the parties, all freight charges and insurance costs shall be the responsibility of Buyer and will be invoiced as a separate line item to be paid by Buyer.

6. INSPECTION AND ACCEPTANCE OF GOODS - Buyer shall examine Products promptly upon receipt of delivery from the carrier. Buyer shall advise the carrier of any damages or shortages prior to acceptance of Products and, except for any latent defects, shall advise Seller of any claims with respect to shortages, damages or discrepancies within ten (10) days after receipt thereof. If Buyer does not so notify the carrier and Seller of any nonconforming or damaged Products during this period, the Products shall be deemed accepted and it is expressly agreed that Buyer shall have waived all claims based on any defects that were or would have been discovered on reasonable inspection during this period. Buyer shall afford Seller a reasonable opportunity to inspect such nonconforming or damaged Products and to cure any nonconformity. BUYER'S FULL OR PARTIAL PAYMENT OR ACCEPTANCE OF DELIVERY OF PRODUCTS WITHOUT NOTIFYING THE CARRIER AND SELLER OF ANY DAMAGES OR SHORTAGES IN ACCORDANCE WITH THIS SECTION SHALL CONSTITUTE ACCEPTANCE OF SUCH PRODUCTS.

7. DELIVERY - Seller's delivery or shipping dates are approximate only and merely represent Seller's best estimate of time required to make delivery or shipment. Shipment dates are contingent on prompt receipt by Seller of all necessary shipping information. Seller shall not be held responsible for failure to meet estimated shipping dates, and in no event shall Seller be liable for any loss, cost, damage or expense whatsoever incurred by Buyer or its customers that may result therefrom.

8. RETURN POLICY - No merchandise shall be returned without a written authorization from a Ekocommerce official.

9. TECHNICAL DATA; PRODUCT USE - All technical information and instruction of use are free to download on our website www.ekocommerce.it or to be required directly to the Seller.

10. GOVERNING LAW - The laws of the State of Italy shall govern the validity, interpretation and enforcement of this agreement, without regard to its conflicts of law principles.

11. THE PICTURES ARE PURELY INDICATIVE - Being constantly committed to product improvement, the features and images of the items in the catalog may be changed at any time without notice.
